## Summary

Senior Software Engineer at SAP SuccessFactors specializing in high-throughput distributed systems and DAG orchestration frameworks. 9+ years of experience building scalable backend solutions processing billions of events across multi-tenant environments. Proven track record in technical leadership, performance optimization from seconds to milliseconds, and architecting enterprise-grade data ingestion pipelines. Strong background in algorithm design and competitive programming with expertise in solution architecture and system design.

## Skills

**DevOps:** AWS, K8s, Docker, Jenkins
**Code Quality:** Jenkins, Checkmarx, SonarQube, Sonatype
**Back-end:** Java, Spring Boot, Hibernate, REST API, OpenAPI, Redis, Kafka, Postgres

## Work Experience

**Senior Software Engineer**, SAP SuccessFactors 11/2024 – present
*Tech Stacks: Java, Spring Boot, SAP HANA, Kafka*

- Architected a reusable DAG orchestration framework from the ground up — a configurable thread-pool engine supporting parallel/sequential execution with customizable retry and timeout handling, sustaining 20,000+ tasks/hour (2M+ events/hour) at peak
- Built a self-healing reliability layer (heartbeat monitoring, automatic stuck-workflow detection and rescheduling) and Spring Boot auto-configuration with REST APIs, enabling framework adoption across multiple teams
- Built a data ingestion service on the framework that onboards 25 talent resource types into SAP Business Data Cloud, processing 1.9 billion+ events across 149 customer tenants in 11 datacenters, with the largest single tenant onboarding 270M+ events
- Developing a consent-gated evidence-collection service that gathers employee work-activity signals across Microsoft 365, Google Workspace, and internal SuccessFactors sources into a typed signal schema, feeding SAP's AI evidence-synthesis platform

**Lead Backend Engineer**, National Australia Bank 05/2021 – 08/2024
*Tech Stacks: Java, Spring Boot, Hibernate, Postgres, Kafka, Redis, AWS Glue*
*Promoted: Senior Backend Engineer (05/2021) → Lead Engineer (11/2022)*

- Grew Vietnam team from 3 to 50 people across 5 squads establishing mentorship programs and demonstrating consistent high-quality delivery
- Resolved critical performance issues implementing Redis cache layer reducing response times from 8+ seconds to 100ms and covenant queries to 3 seconds
- Led back-end integration across 3 squads for Credit Activity system MVP coordinating API contracts and establishing integration patterns
- Led comprehensive refactoring and data migration efforts for complex legacy User Access Management system enabling ongoing feature development
- Extended platform architecture to onboard 2 new business areas implementing User Access Management supporting 150k+ corporate clients
- Established reliable database migration pipeline advising DevOps team on Flyway implementation reducing deployment incidents and improving release efficiency

**Fullstack Software Engineer**, ZALORA Group 10/2019 – 05/2021
*Tech Stacks: React, Redux, Golang, Solr, AWS (Lambda, ECS), Docker*

- Released Earth Edit and Luxury features contributing 15% of total ZALORA Q3 2020 revenue across 6-country mobile web platform

- Migrated build process from Jenkins to AWS CodeBuild with optimized bundle sizes under 150KB, moved Costa search architecture to blue-green ECS deployment, and built Lambda deployment bot
- Implemented A/B testing for Learning-to-Rank with Solr and Datajet integration while improving caching with in-memory solutions for search relevance
- Reduced error rates to less than 1% through comprehensive error handling and logging optimization in Sentry and NewRelic platforms
- Optimized and scaled the Costa service to handle 50,000 RPM per country (across 6 countries) with P90 latency around 50ms during the 11/11 peak

**Fullstack Software Engineer & Scrum Guardian**, DEK Technology 04/2018 – 10/2019
*Tech Stacks: Node.js, Kafka, Kubernetes, Cassandra, Hadoop HDFS*

- Developed Davis visualization tool providing statistical insights for test case execution and built Kafka connectors creating real-time data pipeline from Jenkins
- Deployed multi-component applications to Kubernetes with comprehensive EFK logging system and established CI pipeline achieving nearly 100% test coverage
- Served as Scrum Guardian facilitating team processes and conducted comparative analysis between Hadoop HDFS + Apache Hive and Cassandra for backend optimization

**Software Engineer**, Global Cybersoft 06/2016 – 04/2018
*Intern (06/2016 – 12/2016) → Fresher Engineer (07/2017 – 04/2018)*
*Tech Stacks: Java, Spring MVC, Hibernate, PostgreSQL, Java Swing*

- Developed desktop application for industrial printing operations and built surveillance system using Spring MVC and Hibernate integrating CV algorithms
- Designed system architecture, managed development tracks, and presented technical solutions to stakeholders

## Honors & Awards

**12th Place:** ACM-ICPC VietNam Southern Provincial Programming Contest, Ho Chi Minh city, 2015
**2nd Place:** Olympic cap truong Khoa hoc tu nhien, Ho Chi Minh city, 2013
**3rd Place:** Hoc sinh gioi cap thanh pho, Ho Chi Minh city, 2012
**1st Place:** Hoc sinh gioi cap thanh pho, Ho Chi Minh city, 2011
**3rd Place:** Tin hoc tre, Ho Chi Minh city, 2011

## Education

**Bachelor of Science in Computer Science and Engineering**, Vietnam 2013 - 2017
University of Science
*Ho Chi Minh city*
Degree Classification: Very Good

**AWS Certified Solutions Architect – Associate**, AWS 2024
*Ho Chi Minh city*
View Cert.

**AWS Certified Cloud Pratitioner**, AWS 2022
*Ho Chi Minh city*
View Cert.

**TOEFL ibt**, English Certificate 2015
*Ho Chi Minh city*
85 pts
